Profile:

A passionate Software Developer with strong foundation in Node.js full-stack development, proficient in working with databases like MongoDB and MySQL, and skilled in API integration. Eager to apply my knowledge and skills in a **MERN Stack Internship** at top-notch company, with a strong desire to contribute to the growth and success of the team.

Academic Qualifications:

IIMS College – BSc (Hons) Computing (2021 – 2025)

United Academy – Higher Secondary Education Board (2019)

Peace Garden Sec. School – Secondary Education Examination (2017)

Computer Skills:

| | |
|-----------------------------------|---|
| Programming Languages | JavaScript, HTML/CSS, Python |
| Frameworks & Libraries | Node.js, Express.js, React.js, Django |
| Databases | MySQL, MongoDB |
| Tools & Competency | Git, GitHub, Teamwork, Effective Communication, Agile/Scrum |

Achievements:

- Successfully Completed a workshop on Git and GitHub

Projects:

Evergreen Gym Management System (Deployed)

Technologies: Django, HTML/CSS, JavaScript, MySQL, PythonAnywhere

- Developed a comprehensive management system for Evergreen Gym Fitness, including payment tracking and membership management.

Yamaha AMC (Deployment Phase)

Technologies: Django, HTML/CSS, JavaScript, MySQL

- Developed an Annual Maintenance System for Yamaha, enabling user management, bike servicing, and integration with a card-swiping device to display user details for streamlined servicing at Yamaha service centers.

Khokana Paau Website (Ongoing)

Technologies: Node.js, Express.js, React, HTML/CSS, JavaScript, MongoDB

- Developed a fully dynamic website for Khona Paau with features including online registration, admin-managed product listings, shopping cart and checkout, user reviews, and a photo gallery for showcasing staff and facilities.

React Mini Projects

Technologies: React, Tailwindcss, HTML/CSS

- Developed a Memory Skill Game, Rock Paper Scissor Game, Card Game, Calculator, To-Do List, Typing Speed Test, Quiz App etc. that improves skills further while continuing to work with useState, useEffect, props, and hooks

Event Management System (Group Project)

Technologies: Node.js, Express.js, MongoDB, React, Tailwindcss

- Developing an event management platform that allows users to browse, book, and manage events like blood donation drives, concerts, and programs, featuring ticketing, real-time event updates, and dedicated management roles for sound systems, stage setup, and venue coordination.
